EZ-Pull PATENTED Quick Disconnect

Tired of squeezing into that septic tank or riser to break loose a hard to reach, corroded union with an awkward pipe wrench? Well, you won't have to anymore with the EZ-Pull quick disconnect. It allows for quick removal or installation of a pump and/or floats, without having to lie on the ground and stick your head into a septic tank. The EZ-Pull has a two piece tapered male and female connection that locks itself into place when you slide the two pieces together. Injected molded, glass filled thermoplastic with an o-ring that provides a watertight seal even under high head conditions. Available in 1 1/2" and 2" FPT.

EZ-Puller PATENT PENDING

A perfect companion to the EZ-Pull Quick Disconnect, the EZ-Puller allows you to quickly and safely remove or install a pump and/or floats. You'll never have to worry about dropping the pump again. With the EZ-Puller, all you have to do is insert it into the eye of the EZ-Pull, tilt it forward to activate the safety hook and disengage the EZ-Pull and pull out the pump. It's really that simple.
